**DETAILED ACTION**

***Notice to Applicant***

1. This communication is in response to the application filed 11/27/00. Claims 1-60 are pending.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-38 are rejected under 35 U.S.C. 102(e) as being anticipated by Jeacock et al (US Patent No. 6,014,630).

As per claims 1-19, Jeacock teaches a method for selecting a presentation template, incorporating information on a healthcare procedure for a recommended course of treatment into the presentation template, incorporating user-specific data into the template and generating and saving the final presentation. (Figures 3a,3b, 4, 7a-7c; col. 3, lines 56-col. 5, lines 20; col. 6, lines 5-19). Jeacock further discloses a method that allows the user to modify the final presentation by adding, removing, and otherwise altering information in the presentation and to display the final presentation. (col. 5, lines 1-44) The final presentation (i.e. document) formatted by the software linked to a

system workstation (i.e. stored to a desktop application) and printed out for the patient.  
(col. 3, lines 59-col. 4, lines 15; col. 6, lines 5-24)

Claims 20-38 repeat substantially the same subject matter of claims 1-19 as a set of instructions embodied on computer readable medium, causing a computer to execute the series of steps recited in claims 1-19. As the underlying process has been shown to be computer implemented and disclosed by the teachings of Jeacock in the above rejection of claims 1-19, it is readily apparent that the Jeacock reference includes a computer readable medium storing instructions to perform the recited functions on a computer. As such, these limitations are rejected for the same reasons provided in the rejection of claims 1-19, and incorporated herein.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 39-60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jeacock in view of Parker (Microsoft Office 4 for Windows for Dummies).

As per claims 39-60, Jeacock teaches a computer system for creating and revising customized presentations to provide healthcare information to patients. The system includes at least one computer workstation with memory means and input means to type or select information to be incorporated into the presentation. (Figures

Art Unit: 3626

3a,3b, 4, 7a-7c; col. 3, lines 56-col. 5, lines 20) The system also includes software and one or more databases storing relevant data for presentation preparation. (col. 6, lines 5-19) Jeacock further discloses the use of templates for creating the presentations (col. 6, lines 5-24), but does not expressly discuss the use of slides as part of the user presentation. Parker discloses that Microsoft Powerpoint allows users to incorporate slides as part of a customized visual presentation. At the time of the Applicant's invention, it would have been obvious to one of ordinary skill in the art to modify the system of Jeacock with the teaching of Parker to include slides as part of a customized patient presentation. (pages 187-197) One would have been motivated to do this to improve or increase the visual impact of the presentation and to provide a quick and efficient way for a user to review and/or reformat the final presentation.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- Gorbet et al (USPN 6,542,163) disclose a method and system for providing tips for creating a customized slide presentation.
- Portnoy et al (USPAN 2002/0062228) teach a system for customizing medical presentations for patients.
- Hunt (USPN 6,084,581) teaches a system and method for creating videos with customized content.

Art Unit: 3626

- Rakshit et al (USPN 5,799,282) teaches an interactive system and method for establishing patient informed consent for medical procedures.
